

CLAIMS:

1. A roof rack comprising:

**a pair of roof rails extended in parallel each other and connected to a roof of a vehicle;
a cross rail for connecting the roof rails; and
a stopper mechanism including a handle operable for fixing the cross rail to the roof rails; wherein
the cross rail is movable relative to the roof rail when the handle is at a first position
and the cross rail is immovable relative to the roof rail when the handle is at a second position.**

2. The roof rack according to Claim 1, wherein the stopper mechanism further comprises a cam member and a contact member for contacting the cam member; wherein the roof rails compressively contact by the movement of the contact member when the handle is at the second position.

3. The roof rack according to Claim 2, wherein the contact member is fixed to the handle and is provided with a projection portion and the cam member is fixed to a holder which is movable relative to the roof rails and is provided with a cam surface which contacts with the projection portion.

4. The roof rack according to Claim 3, wherein the holder is compressively contacted with the roof rails by the cam member when the handle is at the second position.
